# **Unhealthy Jackets**

## **Team Members:**

Rhea Mathew, Tianqi Sun, Ronith Yalamanchili, Parth Shinde, Dristi Shah

## Problem

Determine correlation between certain climate events, such as decreasing forest area and temperature, malaria spread, and commodity prices.

#### **Datasets Used**

Annual Rate of Anomalies in Temperature:

```
Forest Cover:
    https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/Forest_Area_ShareOf_Total_Area.csv

Malaria Atlas:
    https://raw.github.com/pshinde612/Team-Unhealthy-Jackets/main/MalariaAtlas_Data_Vectors_1990-2009.csv

Annual Corn Prices:
    https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/cornpricesglobalimf.csv

Malaria Sets:
    https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PV_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PF_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PF_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PF_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PF_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PF_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PF_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PF_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PF_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PT_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PT_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PT_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/main/MALARIA_2000_2019_PT_ADMIN2_ALL_AGES.CSV_https://raw.githubusercontent.com/pshinde612/Team-Unhealthy-Jackets/mai
```

# Preprocessing

- 1. Deleted irrelevant columns in large datasets
- Cleaned up NaN values using function .na()
- 3. Narrowed down a range of years covered in all datasets
- 4. Had quarterly values for corn price, so used average to annualize and make compatible with other datasets
- 5. Grouped column data by year into one new dataset
- 6. Dropped year column

# Mishaps

- Set year as x-value, malaria as the y-value
- Original linear regression error: ~500,000

## **Fixes**

- Dropped year column since it was irrelevant
- New Linear regression error: ~170,000
- Set corn prices as the y-value, malaria as an x-value
- New SVM error: 0.0272

# Results

- X-values: temperature anomaly, forest cover, malaria species
- Y-value: corn price

Model	Mean Squared Error
SVM	0.0272
Linear Regression	0.0381

### **Current State**

- Final product are good SVM and Linear Regression models with respectable values for error and accuracy
- Clearly shows a correlation between environmental/climate factors and corn prices

### **Future Plans**

- More data!
- X-values: Add more climate/environment factors such as pollution/emissions of various greenhouse gases
- Y-Values: Add price data of other crops, and of different financial products of agricultural commodities, including derivatives, futures contracts, and bonds
